Awards Committee
Mathematics Department
Community College of Philadelphia

Dear Colleagues,

This is a letter of recommendation for **Pierre de Fermat** who is now applying to the Mathematics Department Award.

Pierre has discovered many interesting results in Number Theory. Pierre's only drawback is that sometimes his proofs are too brief, as he often complains that the margin for writing them is not wide enough.

Pierre, a poor barrister in Toulouse, has also discovered Analytic Geometry.

Yours truly,

Dr. David A. SANTOS
Department of Mathematics
