1. Name the following laws:
   a) \( x + 5 + 2x = x + 2x + 5 \) is an example of the ________________ law of addition.
   b) \( 3(x - 2) = 3x - 6 \) is an example of the ________________ law.
   c) \( (3 + .2) + .8 = 3 + (.2 + .8) \) is an example of the ________________ law of addition.

2. Use the distributive property to multiply: \( \frac{1}{2}(2x - 8y) \)

3. Find the absolute value: \( |-1.2| \)

4. Give an example of an integer: __________, a rational number that is not an integer: _______
   and an irrational number: ___________

5. Evaluate: \( -3\left[6 - (-2)\right] \)
